

Generate HEX file using eclipse

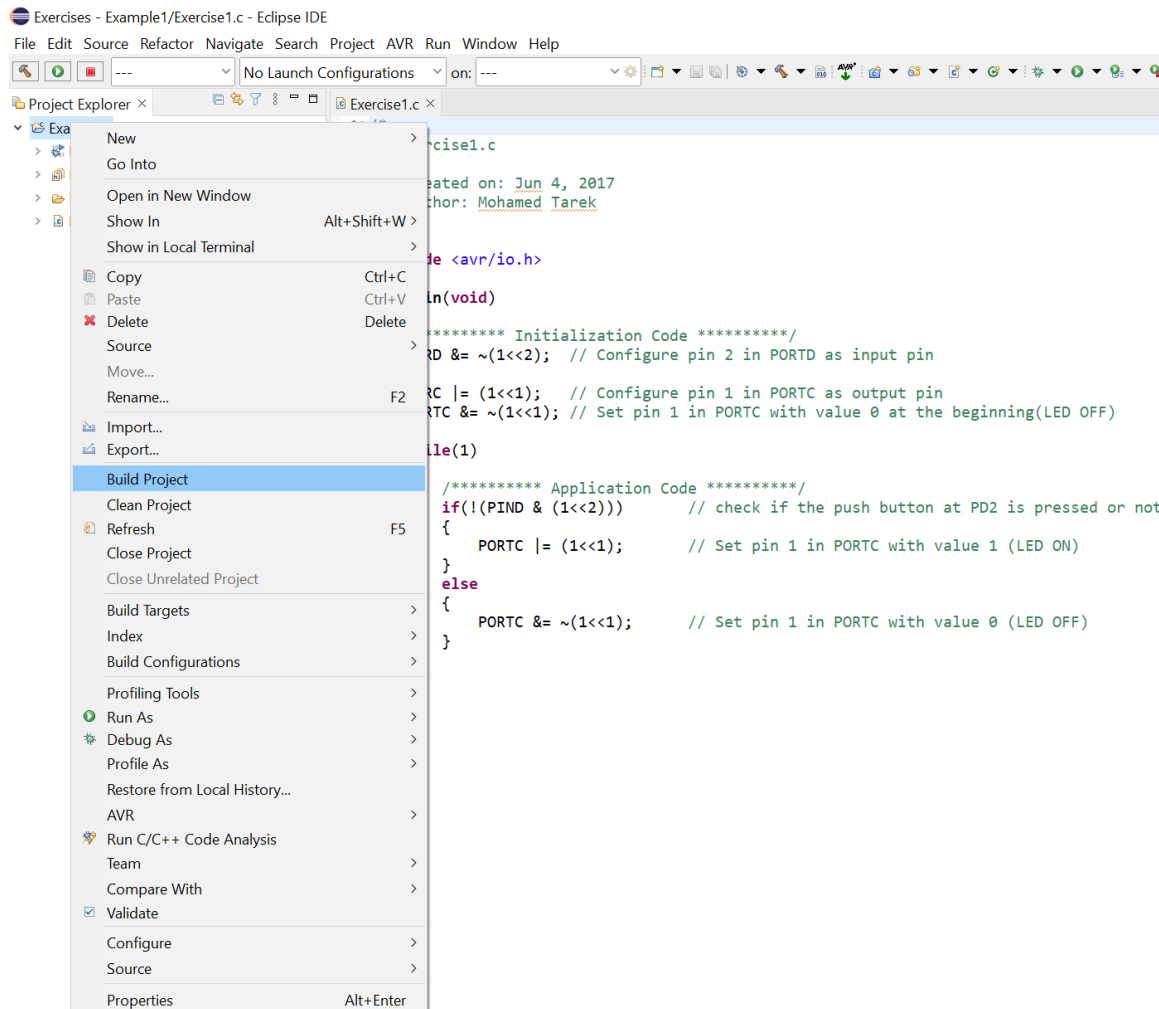

Step 1: Press right click on the eclipse project and choose “Properties”.

Step 2: In **C/C++ Build** tab choose **Settings** then mark “**Generate HEX file for Flash memory**” option.

Step 3: Press OK, re-build the project by right click on the project and then choose **Build Project**.

Step 4: You will find the **.hex** file beside the **.elf** file in your project Debug directory.

Thank You & Good Luck
